AUTOSAR Classic

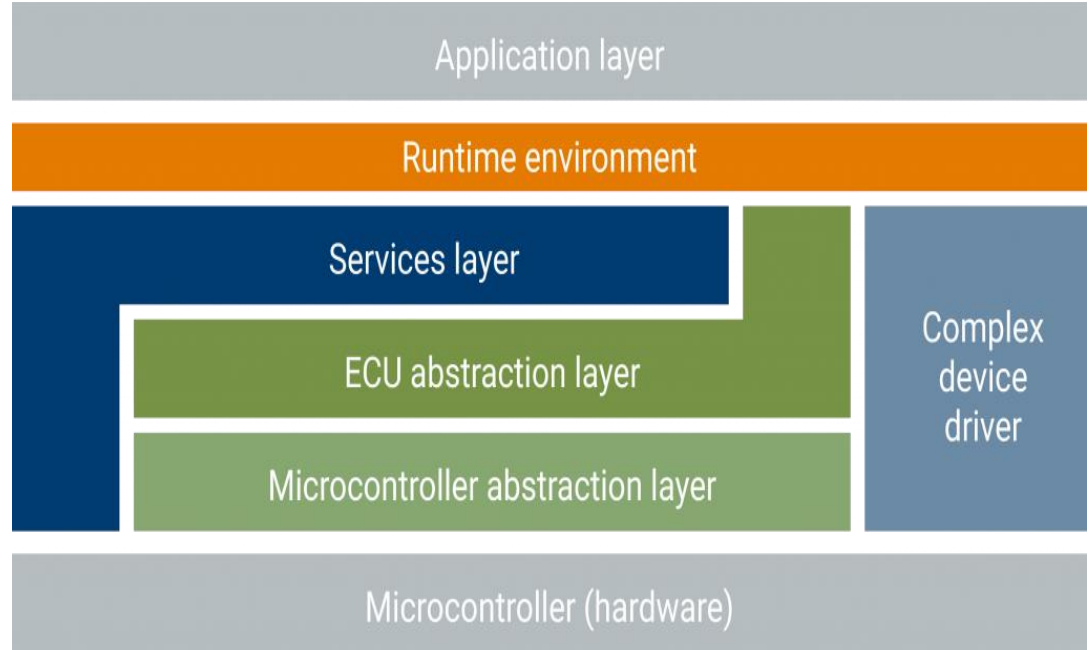

AUTOSAR Classic

- Layered software architecture

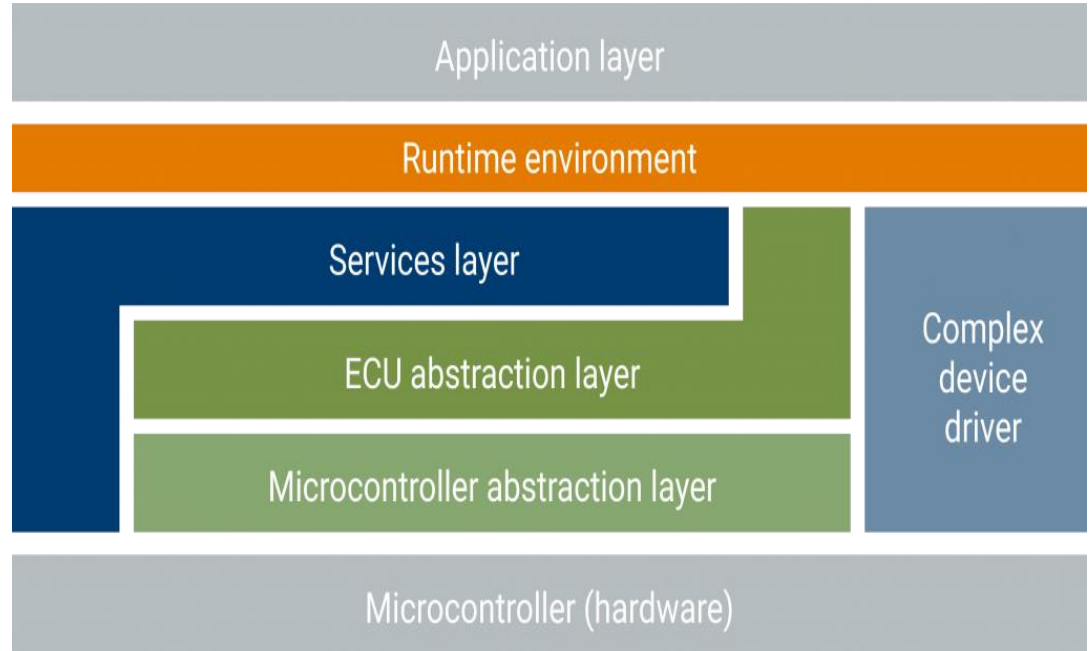

AUTOSAR Classic

- Layered software architecture
- Most layers are independent from the Microcontroller

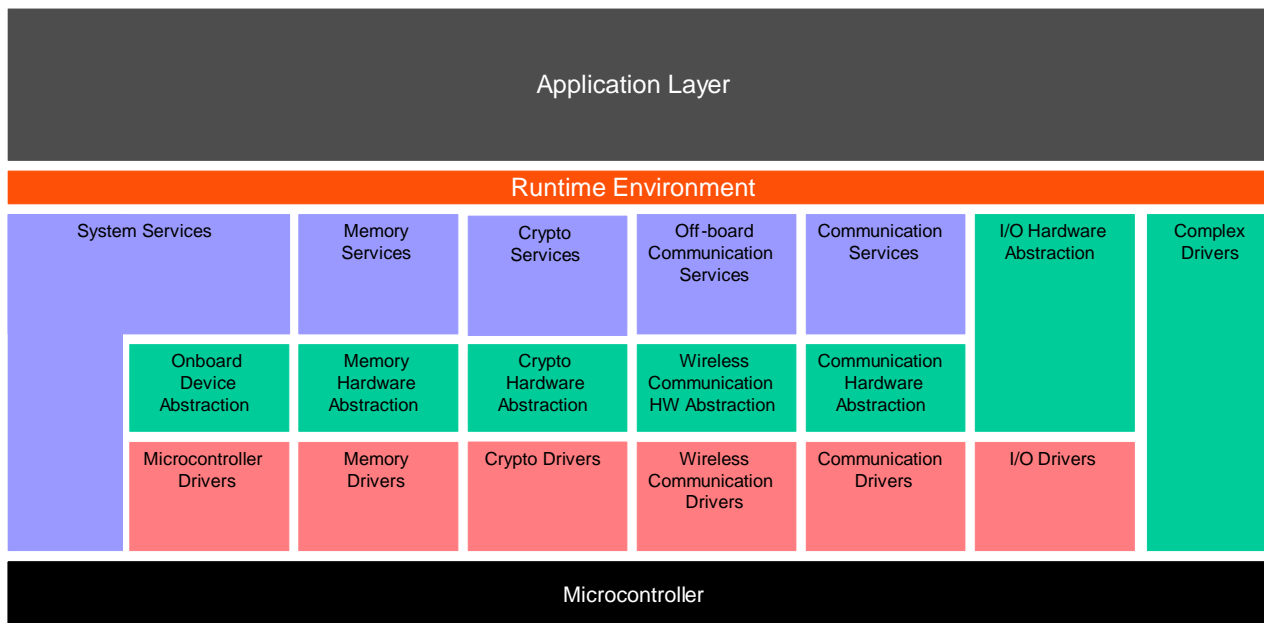

AUTOSAR Classic

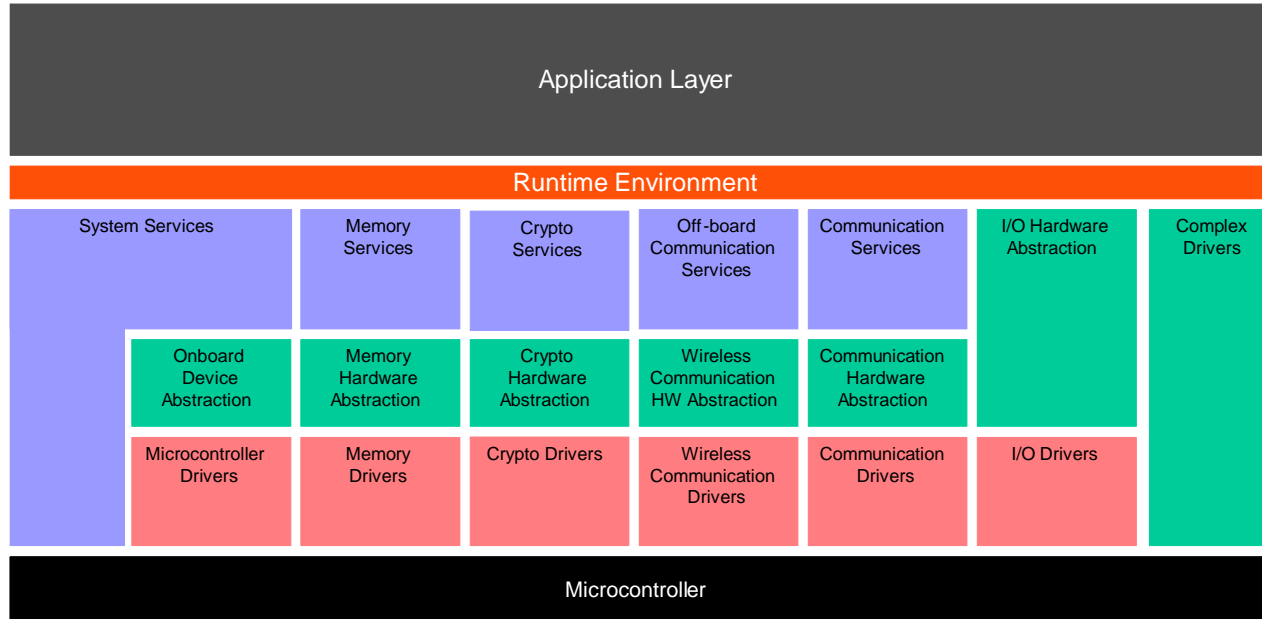

- Layered software architecture
- Most layers are independent from the Microcontroller
- Improve software reusability

AUTOSAR Classic

AUTOSAR Classic

Vulnerabilities can be introduced in any layer!

Summary of AUTOSAR

Summary of AUTOSAR

- Complex software; will contain bugs/vulnerabilities

Summary of AUTOSAR

- Complex software; will contain bugs/vulnerabilities
- Made by different vendors / developers
 - Do you trust your suppliers?

Summary of AUTOSAR

- Complex software; will contain bugs/vulnerabilities
- Made by different vendors / developers
 - Do you trust your suppliers?
- Mature code due to safety requirements
 - i.e. MISRA-C

Summary of AUTOSAR

- Complex software; will contain bugs/vulnerabilities
- Made by different vendors / developers
 - Do you trust your suppliers?
- Mature code due to safety requirements
 - i.e. MISRA-C

Mature! But not guaranteed secure...

What can go wrong?

Potential MCAL vulnerabilities

```
Std_ReturnType Fls_Read(    Fls_AddressType SourceAddress,
                             uint8 *TargetAddressPtr,
                             Fls_LengthType Length)
{
    if(SourceAddress == NULL || TargetAddressPtr == NULL || SourceAddress >= FLS_SIZE) {
        return E_NOT_OK;
    }

    /* potential integer overflow */
    if (Length == 0U || (SourceAddress + Length) > FLS_SIZE) {
        return E_NOT_OK;
    }
    ...
}
```

Potential MCAL vulnerabilities

```
Std_ReturnType Fls_Read(    Fls_AddressType SourceAddress,
                             uint8 *TargetAddressPtr,
                             Fls_LengthType Length)
{
    if(SourceAddress == NULL || TargetAddressPtr == NULL || SourceAddress >= FLS_SIZE) {
        return E_NOT_OK;
    }

    /* potential integer overflow */
    if (Length == 0U || (SourceAddress + Length) > FLS_SIZE) {
        return E_NOT_OK;
    }
    ...
}
```

Potential MCAL vulnerabilities

```
Std_ReturnType Fls_Read(    Fls_AddressType SourceAddress,
                             uint8 *TargetAddressPtr,
                             Fls_LengthType Length)
{
    if(SourceAddress == NULL || TargetAddressPtr == NULL || SourceAddress >= FLS_SIZE) {
        return E_NOT_OK;
    }

    /* potential integer overflow */
    if (Length == 0U || (SourceAddress + Length) > FLS_SIZE) {
        return E_NOT_OK;
    }
    ...
}
```

Who verifies your MCAL for vulnerabilities?

What about MISRA-C?!

What about MISRA-C?!

Dir 4.1 Run-time failures shall be minimized

C90 [Undefined 15, 19, 26, 30, 31, 32, 94]
C99 [Undefined 15, 16, 33, 40, 43-45, 48, 49, 113]

Category Required
Applies to C90, C99

Dir 4.14 The validity of values received from external sources shall be checked

C90 [Undefined 15, 19, 26, 30, 31, 32, 94]
C99 [Undefined 15, 16, 33, 40, 43-45, 48, 49, 113]

Category Required
Applies to C90, C99

A directive is a guideline for which it is not possible to provide the full description necessary to perform a check for compliance. Additional information, such as might be provided in design documents or requirements specifications, is required in order to be able to perform the check. Static analysis tools may be able to assist in checking compliance with directives but different tools may place widely different interpretations on what constitutes a non-compliance.

You cannot conform to directives automagically...

What else?

Vulnerabilities in complex software

Vulnerabilities in complex software

Vulnerabilities in complex software

Who verifies your communication stack?

Mitigating software vulnerabilities

Mitigating software vulnerabilities

- Minimize the low hanging fruit
 - *Secure coding standard, code checkers, ...*

Mitigating software vulnerabilities

- Minimize the low hanging fruit
 - *Secure coding standard, code checkers, ...*
- Find vulnerabilities yourself before attackers do
 - *Continuous security code reviews, ...*

Mitigating software vulnerabilities

- Minimize the low hanging fruit
 - *Secure coding standard, code checkers, ...*
- Find vulnerabilities yourself before attackers do
 - *Continuous security code reviews, ...*
- Make it harder to exploit software vulnerabilities
 - *Software exploitation mitigations, ...*

Sufficiently complex software
has vulnerabilities.

Sufficiently complex software
has vulnerabilities.

Finding them is not always trivial...

Sufficiently complex software
has vulnerabilities.

Finding them is not always trivial...

What if an attacker cannot find any
or they are too difficult to exploit?

Hardware attacks!?

Hardware attacks!?

- Attacker needs physical access the ECU

Hardware attacks!?

- Attacker needs physical access the ECU
- Attacker often needs to open the ECU

Hardware attacks!?

- Attacker needs physical access the ECU
- Attacker often needs to open the ECU
- Different types of HW attacks:
 - E.g. PCB-level, Fault injection, Side Channels, etc.

Hardware attacks!?

- Attacker needs physical access the ECU
- Attacker often needs to open the ECU
- Different types of HW attacks:
 - E.g. PCB-level, Fault injection, Side Channels, etc.
- Often a stepping stone for more scalable attacks

Case study: FI on AUTOSAR

“Using FI to take control of an AUTOSAR-based ECU.”

Case study: FI on AUTOSAR

“Using FI to take control of an AUTOSAR-based ECU.”

- Demonstration ECU implemented using:
 - STM32F4 development board
 - Arctic Core for AUTOSAR v3.1

Case study: FI on AUTOSAR

“Using FI to take control of an AUTOSAR-based ECU.”

- Demonstration ECU implemented using:
 - STM32F4 development board
 - Arctic Core for AUTOSAR v3.1
- Attacking using a [previously described](#) FI fault model

“Introducing faults into a chip in order to change its intended behavior.”

Fault Injection Setup

Fault Injection Setup

Fault Injection Setup

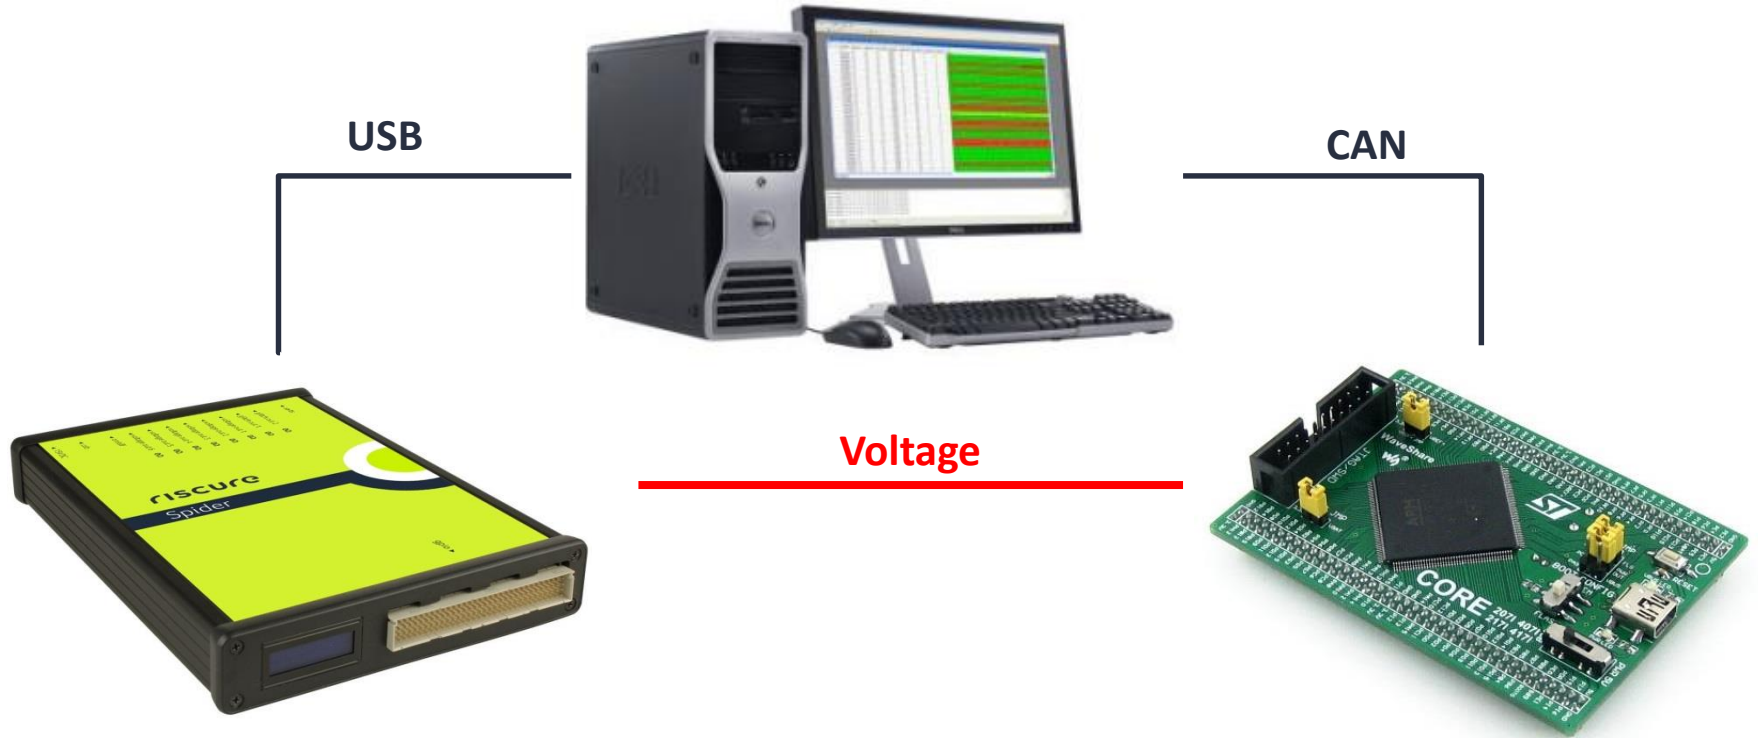

Fault Injection Setup

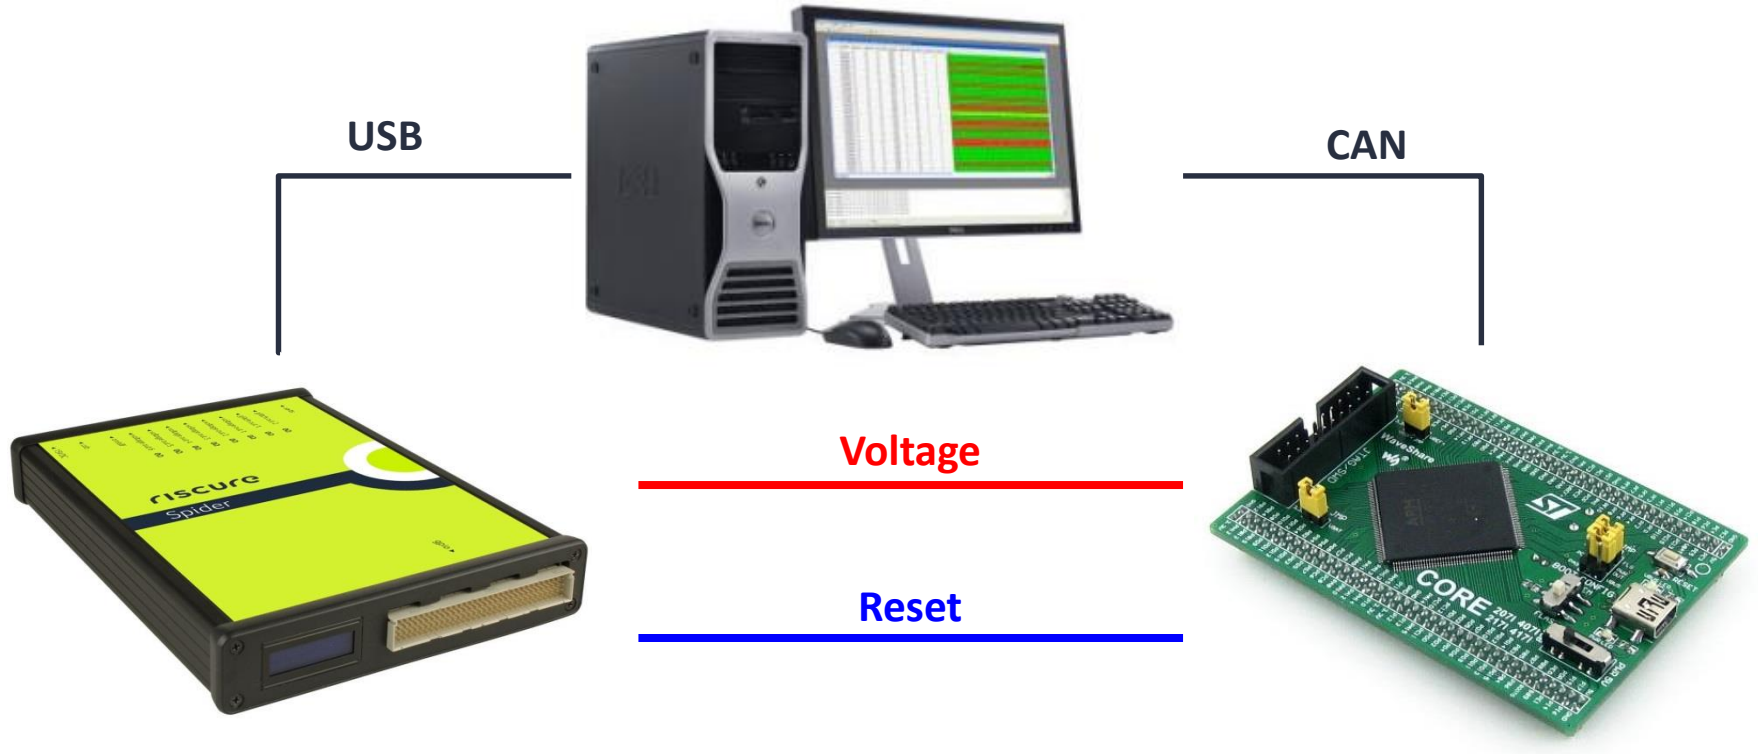

Fault Injection Setup

Fault Injection Setup

Fault Injection Setup

What can we do with fault injection?

Fault Injection Fault Model

“Instruction corruption.”

Fault Injection Fault Model

“Instruction corruption.”

- Glitches can be used to modify instruction

Original instruction:

```
add r0, r1, r3 1110 1011 0000 0001
                0000 0000 0000 0011
```

Glitched instruction:

```
add r0, r1, r2 1110 1011 0000 0001
                0000 0000 0000 0010
```

Fault Injection Fault Model

“Instruction corruption.”

- Glitches can be used to modify instruction

| Original instruction: | Glitched instruction: |
|--|--|
| <code>add r0, r1, r3</code> 1110 1011 0000 0001 0000 0000 0000 0011 | <code>add r0, r1, r2</code> 1110 1011 0000 0001 0000 0000 0000 0010 |

- In other words, we can modify software

Fault Injection Fault Model

“Instruction corruption.”

- Glitches can be used to modify instruction

| Original instruction: | Glitched instruction: |
|--|--|
| <code>add r0, r1, r3</code> 1110 1011 0000 0001 0000 0000 0000 0011 | <code>add r0, r1, r2</code> 1110 1011 0000 0001 0000 0000 0000 0010 |

- In other words, we can modify software
- Fault injection breaks any software security model

How can we use this to attack
AUTOSAR-based ECUs?

Attacking AUTOSAR

Attacking AUTOSAR

- Our goal is to execute arbitrary code

Attacking AUTOSAR

- Our goal is to execute arbitrary code
- Our only entry into the device is the CAN bus

Attacking AUTOSAR

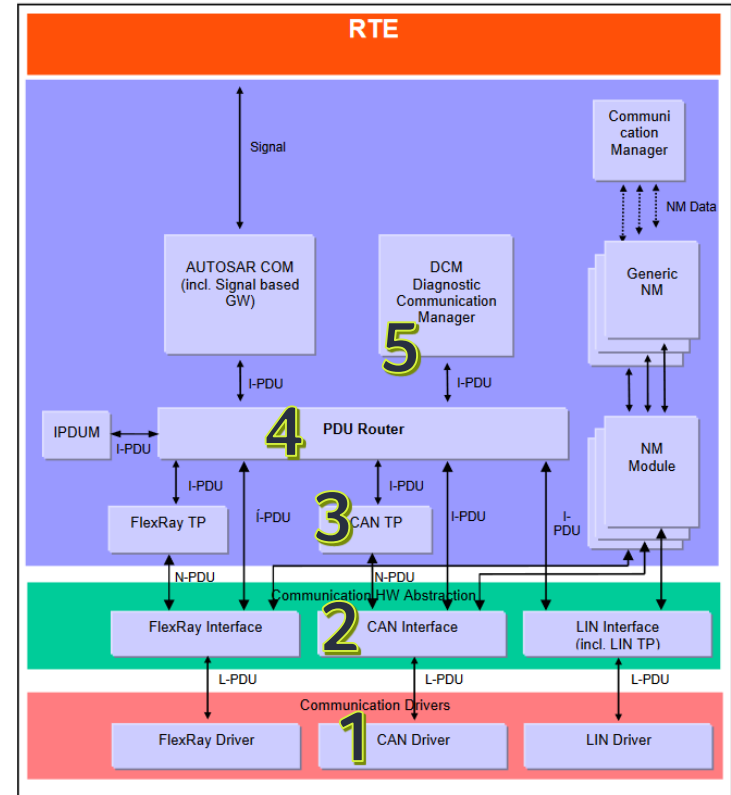

- Our goal is to execute arbitrary code
- Our only entry into the device is the CAN bus
- Of course, we have physical access...

AUTOSAR's PDU Router

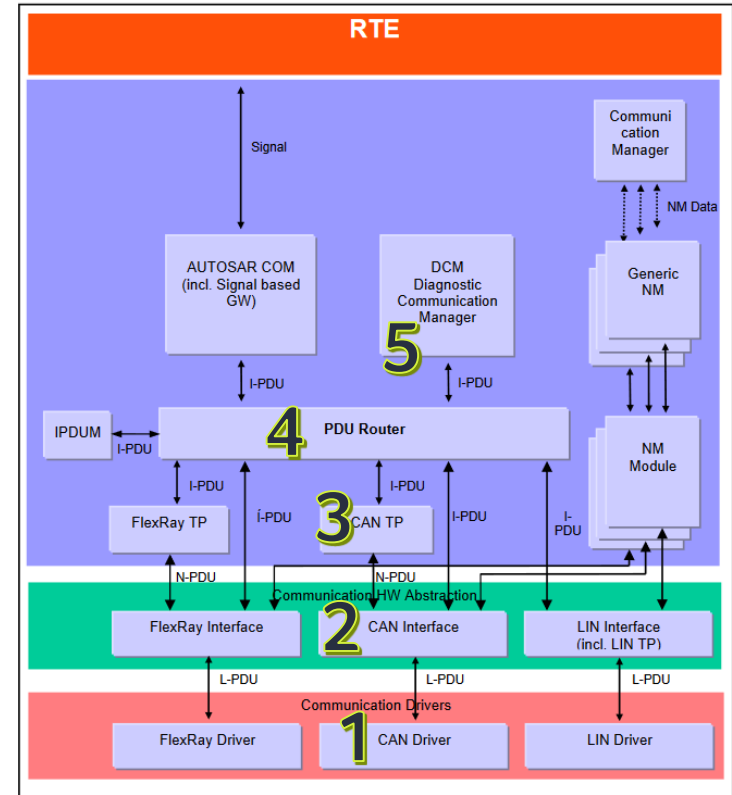

AUTOSAR's PDU Router

1. CAN driver receives 8-byte CAN frame

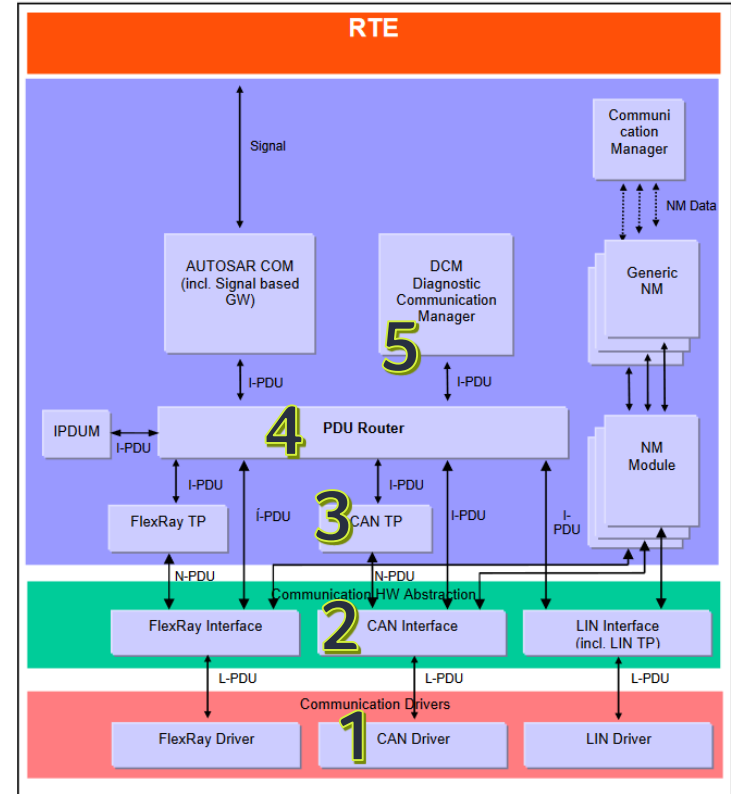

AUTOSAR's PDU Router

1. CAN driver receives 8-byte CAN frame
2. Frame passes the CAN interface

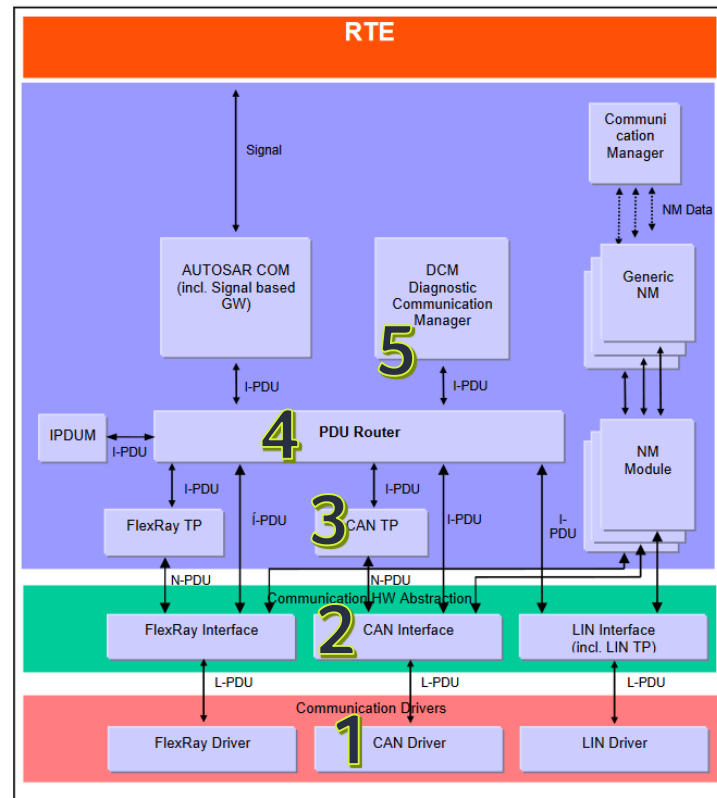

AUTOSAR's PDU Router

1. CAN driver receives 8-byte CAN frame
2. Frame passes the CAN interface
3. Payload is reassembled by ISO-TP

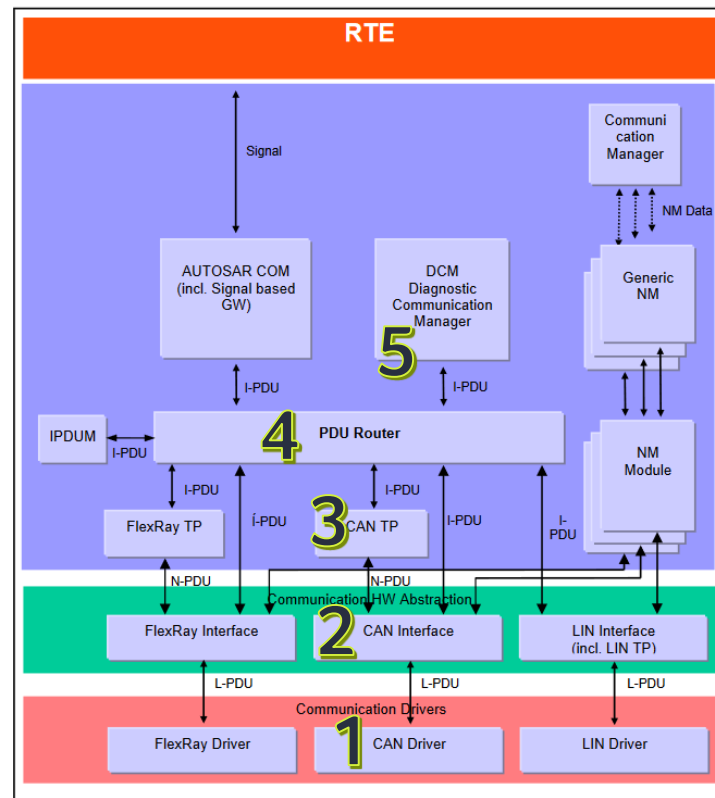

AUTOSAR's PDU Router

1. CAN driver receives 8-byte CAN frame
2. Frame passes the CAN interface
3. Payload is reassembled by ISO-TP
4. Payload is copied to COM or DCM

AUTOSAR's PDU Router

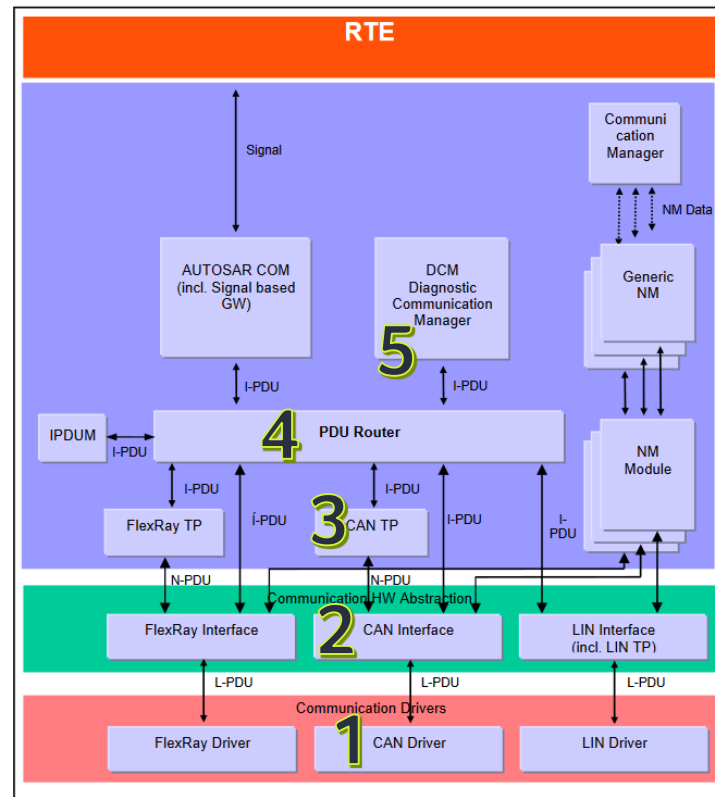

1. CAN driver receives 8-byte CAN frame
2. Frame passes the CAN interface
3. Payload is reassembled by ISO-TP
4. Payload is copied to COM or DCM
5. COM or DCM handles the payload

Where do we attack?!

AUTOSAR's PDU Router

1. CAN driver receives 8-byte CAN frame
2. Frame passes the CAN interface
3. Payload is reassembled by ISO-TP
4. **Payload is copied to COM or DCM**
5. COM or DCM handles the payload

Attacking AUTOSAR's PDU router

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

- **Step 2:** We inject the glitch when the pointers are being copied

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

- **Step 2:** We inject the glitch when the pointers are being copied
- **Step 3:** Successful glitches load a pointer into the PC register

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

- **Step 2:** We inject the glitch when the pointers are being copied
- **Step 3:** Successful glitches load a pointer into the PC register
- **Step 4:** MCU will execute the ISO-TP message (blue blocks)

Attacking AUTOSAR's PDU router

- **Step 1:** Send an ISO-TP CAN message (< 4096 bytes)

- **Step 2:** We inject the glitch when the pointers are being copied
- **Step 3:** Successful glitches load a pointer into the PC register
- **Step 4:** MCU will execute the ISO-TP message (blue blocks)
- **Step 5:** Wait for IDLE task to be scheduled and execute our task

Why does this work?

Attacking AUTOSAR's PDU Router

```
BufReq_ReturnType PduR_CanTpCopyRxData(..., PduInfoType* p, ...) {  
    ...  
    memcpy(p->SduDataPtr, source, p->SduLength);  
    ...  
}
```

Attacking AUTOSAR's PDU Router

```
BufReq_ReturnType PduR_CanTpCopyRxData(..., PduInfoType* p, ...) {  
    ...  
    memcpy(p->SduDataPtr, source, p->SduLength);  
    ...  
}
```

Disassembled
memcpy()

```
<memcpy>:  
mov     ip, r0  
orr.w   r3, r1, r0  
ands.w  r3, r3, #3  
bne.n   8008300 <memcpy+0xe8>  
subs    r2, #64 ; 0x40  
bcc.n   80082ac <memcpy+0x94>  
ldr.w   r3, [r1], #4  
str.w   r3, [r0], #4  
subs    r2, #64 ; 0x40  
bcs.n   8008228 <memcpy+0x10>  
adds    r2, #48 ; 0x30  
bcc.n   80082d4 <memcpy+0xbc>
```

Attacking AUTOSAR's PDU Router

```
BufReq_ReturnType PduR_CanTpCopyRxData(..., PduInfoType* p, ...) {  
    ...  
    memcpy(p->SduDataPtr, source, p->SduLength);  
    ...  
}
```

Disassembled

adds   r2, #48 ; 0x30  
bcc.n  80082d4 <memcpy+0xbc>
```

We take control of the Program Counter (PC) during the copy!

We have our own task. Now what?!

Post Exploitation

Post Exploitation

- Extract information (secrets)

Post Exploitation

- Extract information (secrets)
- Analyze firmware dynamically

Post Exploitation

- Extract information (secrets)
- Analyze firmware dynamically
- Perform additional attacks (e.g. side channel attack)

Post Exploitation

- Extract information (secrets)
- Analyze firmware dynamically
- Perform additional attacks (e.g. side channel attack)
- Add (malicious) and/or change functionality

Is all hope lost?

Hardening AUTOSAR-based ECUs

Hardening AUTOSAR-based ECUs

- Adhere to (automotive) security guidelines/standards

Hardening AUTOSAR-based ECUs

- Adhere to (automotive) security guidelines/standards
- Make use of strong (hardware-based) security

Hardening AUTOSAR-based ECUs

- Adhere to (automotive) security guidelines/standards
- Make use of strong (hardware-based) security
- Minimize attack surface and increase attack complexity

Hardening AUTOSAR-based ECUs

- Adhere to (automotive) security guidelines/standards
- Make use of strong (hardware-based) security
- Minimize attack surface and increase attack complexity
- Consult internal/external embedded security experts

To wrap up...

Takeaways

Takeaways

- Devices (incl. AUTOSAR-based ECUs) will be hacked

Takeaways

- Devices (incl. AUTOSAR-based ECUs) will be hacked
 - Not AUTOSAR's fault!

Takeaways

- Devices (incl. AUTOSAR-based ECUs) will be hacked
 - Not AUTOSAR's fault!
- No (known) software vulnerabilities \neq secure

Takeaways

- Devices (incl. AUTOSAR-based ECUs) will be hacked
 - Not AUTOSAR's fault!
- No (known) software vulnerabilities \neq secure
- Hardware attacks are efficient and do scale
